This item is currently located at Amazon.com.[Defensive reactions of the cellular immune system in peripheral blood of patients with diffuse toxic goiter]. The objective of this work was to study changes of the functional activity of T- and B-lymphocytes and thymocytes in the peripheral blood of patients with toxic diffuse goiter (TDG) against a background of diffuse toxic hypothyroidism (DTNH). Blood samples were obtained from patients with TDG (n = 22) and from healthy subjects (n = 20). The data obtained show that T-lymphocytes and thymocytes respond similarly to the exposure to inducers in patients with TDG and DTNH. These cells are capable of killing the cells of the T-cell lines irrespective of their ability to proliferate in the presence of stimulatory agents. Compared with the control, there are changes in the functional activity of T-lymphocytes, which is characterized by the inhibition of proliferative responses to mitogens, an increase in the formation of cells of the L3/L4 class,

a decrease in the number of cells of the L2/L3 class. These changes may be of compensatory nature.using System; using System.Collections.Generic; using System.Linq; using System.Text; using System.IO; namespace dnlib.Utils { /// /// Helper class which formats 's path to format for being /// used in the stream public static class CodeFileFormatUtil { /// /// Formats a code file path to format for being /// used in the stream /// The code file which should be formatted /// The path, formatted for use in the stream 82157476af
